

# Mini Bulletin XRX15AR

## WorkCentre 4250

### SPAR Release 15.005.40.000

Release Date: Oct 1, 2015

## Purpose

This Bulletin is intended **ONLY** for the specific security problem identified below. The problem identified has been rated a criticality level of **IMPORTANT**

Includes fix for:

- SSLv3.0 Poodle Vulnerability (CVE-2014-3566). SSLv3 supports an older encryption method that is no longer considered secure, and is no longer viable for protecting sensitive data in transmission over networks. This could allow a Man-in-The-Middle (MiTM) attack where a person on the network can force a “downgrade” of the session between a client and server to use SSLv3 instead of a more secure protocol such as TLS. Xerox has added an option to disable SSLv3 in the software version available below. Disabling SSLv3 removes vulnerability to this CVE.
- Logjam Vulnerability In OpenSSL (CVE-2015-0400). A vulnerability in TLS protocol versions 1.2 and earlier allows man-in-the-middle attacks to occur against vulnerable systems that support older key exchange methods. Xerox has included a non-vulnerable version of OpenSSL in the software version available below.
- Fix for TCP vulnerability in VxWorks.

## Software Release Details

**If your software is higher or equal to the versions listed below no action is needed.**

**Otherwise, please review this bulletin and consider installation of this version.**

Model	WorkCentre 4250
System SW version	15.005.40.000
